

Banknote bundling machine is used for processing unsorted cash coming in bags used for deposit machines (ADM) and for merchant cash collection.

The device is a separate workplace for 1-2 cash operators whose task is to form stacks for further recalculation and sorting by specialized equipment.

This equipment allows speeding up the process of primary cash processing by 40-70% in comparison with the cash stacking in the usual manual mode.

The peculiarity of the solution is the use of the principles of frictional movement of banknotes on the automated belt, which finally allows you to form neat bundles of banknotes to fill the tray.

### Advantages of the solution:

- Processing deposits of 12 000 or more banknotes
- Processing of a standard deposit of 2 000 banknotes within 5-8 minutes
- Conveniently adjustable speed of banknotes
- High quality build and ergonomics
- Special table to reduce vibration levels
- Convenient visual tracking of bent or damaged banknotes for removal by the operator

BS/2 provides maintenance and repair of this equipment, as well as training of bank operators with the possibility of certification
